

The vERAM and vSTARS AIRAC data will need to be periodically updated. If you have a subscription to navigraph, you may download it yourself from the manual download page. If not, ZJX will provide the data for you.

Once the data has been downloaded, you will need to replace the waypoints and Airports xml files. In order to do this, you will need to get to the AppData folder.

To get to your AppData Folder:

1. In the search box, type “Run”. This opens the “Run” window.
2. Enter “%AppData%” without the quotes into the window and press enter. A window will populate. Choose the folder that has either vERAM or vSTARS.

3. Replace the Airports.xml and Waypoints.xml files.
4. You have now updated the AIRAC.
