# VIRTUAL ZJX LIMITED CENTER CONFIGURATION

The Virtual ZJX ARTCC, in agreement with VATUSA, is enhancing our center airspace configuration. Instead of seeing the entire JAX Center airspace on your map clients like VAT-SPY, SimAware, or VATSIM-Radar you may see only a portion. This agreement will help our top down center controllers during periods of high work-load and frequency congestion. The following document is aimed at helping you, the pilots, understand the new enroute splits. (full page maps are on pages 2-4 of this document) Callsigns with numbers correspond to standard full top down control. Callsigns with letters correspond to limited top down control.
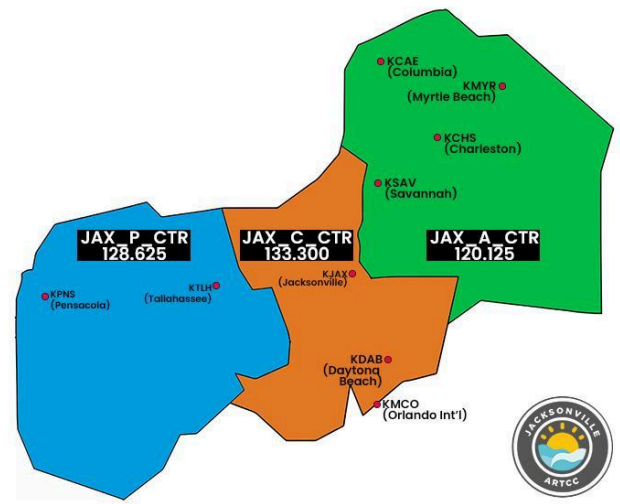

Standard Center	Limited Center
Numbering Configuration	**Lettering Configuration**
Will be displayed as JAX_30_CTR AND JAX_66_CTR	Will be displayed as noted below.

Who do I call?
Always contact **local ATC** (DEL/GND/TWR/APP) when it's online. There are many APP positions that cover more than one airfield top-down. A helpful tool is AirNav

VFR Operation
The beacon code for operating VFR in the NAS (National Airspace) is 1200.
If you are departing VFR from a Class B or Class C airport please **call for clearance** to receive a discrete beacon code. If departing from an open Class D, call for taxi on a 1200 code. If departing from a non-towered airfield or a closed Class D, depart VFR on a 1200 code on CTAF (Common Traffic Advisory Frequency). The CTAF can also be found on VFR sectionals and on AirNav.
