~~~~~INSTRUCTIONS~~~~~

1. The alias file data is uploaded to the vNAS by the FE and will not be used by or downloaded to your personal computer.
2. Take a few minutes to review the file. This file is more robust and organized by situation and position.
3. If there are no strings in the text, the text will print exactly as seen.
4. If there are strings, insert the appropriate number, airport, fix, procedure where you see \$ with a number. i.e. \$1
Some will have more than one string to insert required information.
Strings without a number will generally pull information automatically without input.
5. \$radioname(\$1) or \$freq(\$1) requires the controller ID in the controller list.
6. \$uc will automatically convert text into upper case.
7. See the ZJX PDC intructions for more detailed information on Pre-Departure Instructions.
8. Release time for departure should be input as the total number of minutes, not the Z time.
9. Arrivals
;des Cross \$1 at and maintain \$2, \$arr altimeter \$altim(\$arr).
This string can be used to cross any fix at any altitude.
;dess Cross \$1 at and maintain \$2 at 250 knots, \$arr altimeter \$altim(\$arr).
This string can be used to cross any fix at any altitude and 250 knots.

Some arrivals are north or south dependent, notice the n of s at the end of the arrival.
10. Information lookup
This section can be used for quick reference.
11. Navdata Toggling
vor - Toggles ERAM VORs
fix - Toggles common ERAM fixes
Common STARs are available for toggling if aircraft are taken off an arrival.

IF YOU HAVE ANY QUESTIONS OR IDEAS, PLEASE LET ME KNOW.

*****PILOT DEVIATIONS*****

.cap ***NOTAM*** Welcome to ZJX! Jacksonville Center is operating in a limited enroute configuration. Please read the following document for more information.

https://zjxartcc.org/media/doc/ZJX_Airspace_for_Pilots.pdf

.newpilot .msg \$aircraft Hello, welcome to VATSIM! We're glad to have you flying with us. When you get a moment, we recommend you head to the VATSIM Pilot Resource Center (<https://www.vatsim.net/pilot-resource-centre>) to learn more about flying on the network. This will make you feel more comfortable.

.wrongcallsign .msg \$aircraft Hello, it appears you are not using the correct ICAO callsign for your airline. The correct callsign should be \$uc(\$1). When you have a moment, please log back in with the correct callsign.

.rwylogin .msg \$aircraft Hello, it appears you have logged in while on an active runway. You may be preventing other aircraft from using the runway. Please disconnect, move your aircraft to a parking area, and reconnect. Do not slew your aircraft while still connected. Thank you.

.twylogin .msg \$aircraft Hello, it appears you have logged in while on a taxiway. You may be blocking other aircraft from moving. Please disconnect, move your aircraft to a parking area, and reconnect. Do not slew your aircraft while still connected. Thank you.

.charts .msg \$aircraft Charts for your airport can be found at [https://www.airnav.com/airport/\\$1](https://www.airnav.com/airport/$1) . We recommend having charts on board to avoid improperly flying procedures you have been assigned by ATC.

.vectorsid The departure procedure on which you were cleared contains a vector segment, which specifies a heading to fly until given further instructions by ATC. It appears that instead of following the published procedure, you turned before receiving ATC instructions. In the future, please familiarize yourself with the charted procedure prior to departure. Charts can be found at <https://skyvector.com>, <https://www.airnav.com> . Thank you.

.vectorstar The arrival procedure on which you were cleared ends with a vector segment, which specifies a heading to fly until given further instructions by ATC. It appears that instead of following the published procedure, you turned before receiving ATC instructions. In the future, please familiarize yourself with the charted procedure prior to beginning the arrival. Charts can be found at <https://skyvector.com>, <https://www.airnav.com> . Thank you.
